

ATS RESUME ANALYZER - COMPLETE PROJECT DOCUMENTATION

Welcome to the documentation for your ATS Resume Analyzer! This guide explains every part of your project, from the tools used to the purpose of each file and dependency.

Project Overview

The ATS Resume Analyzer is a full-stack web application designed to help job seekers optimize their resumes. It uses Artificial Intelligence (Gemini AI) to compare a user's resume against a job description, providing a compatibility score and actionable feedback.

Core Features:

1. Resume P

Tools & Technologies Used

- **React.js (Vite):** Frontend Framework
- **Node.js & Express:** Backend Environment
- **MongoDB & Mongoose:** Database
- **Gemini AI:** AI Engine
- **Multer:** File Uploads
- **JWT:** Authentication

File Structure & Explanations

1. Backend (The Brain)

Responsible

- ``server.js``: The entry point. Connects to MongoDB, sets up middleware (CORS, JSON), and defines the main API routes.

- ``routes/``:

2. Frontend (The Face)

- `src/main.jsx`: Starts the React application.

The user interface

- `src/App.js`

Key Dependencies (Libraries)

Backend Dependencies:

- `express`

Frontend Dependencies:

- `react-router-dom`

How to Run the Project

1. Backend:

- Go to `/Backend`

Happy Coding!
